11. Overall, my level of satisfaction with the topics and material	38	5			4.88

I Most Valued:

- I really enjoyed Beth Knapp's presentation. I wish she had CD's with curriculum
- Methods to getting students involved
- Job interview tips that were given, the Ag Earth presentation
- Ms. Knapp's & Mr. Silva's workshops, they were amazing!
- The interviews – good insight to the real world ☺
- Great presenters the first day. This was a very good experience for me.
- Classroom management and Joey's workshop ☺ Mr. Bob (He's awesome!)
Interview help: more prior instruction of what the interview sessions are, less interview rotations (~3), an interview person unrelated to Ag
- The presentations by Dean Archer and Joey Silva and the interview sessions
- Hearing from young teachers about their experiences
The Earth Science and Ag Biology was really great
- The classroom management with Dean Archer – funny and helpful
I wish I would have seen this before student teaching
- The interviewing workshops to me were all the most helpful. Really gave me an insight on how to prepare and how to properly answer.
- Interviews
- Joey Silva and Dean Archer and the wonderful tri-tip dinner
- All the great speakers! They were all very intgetic. I liked getting to ask questions to the new teachers. The interview stuff was good but a lot was repetitive.
- Workshops – Environmental Science
- First day workshops! I learned so much valuable information!
Joey Silva was amazing
- The first day workshops. All three were helpful
- The “interviewing for the Ag Teaching Job”
- Everything. It was very informative
- The interview rotations. All of the questions were varied between the workshops. Each presenter gave different advice. It was great!
- The science curriculum and activities ideas. The discussion panel with new teachers
- Getting to talk to the student teachers from last year, as well as the interview advice. I think it was great to be asked questions and then get to hear others as well as feedback.
- The classroom management hints from Mr. Archer
- The interview questions were extremely helpful
- The interviews and the panel of 2nd year teachers. Both of these were extremely helpful and rewarding

- The help with interviews. The presenters gave a lot of really good information
- Learning management and interview skills ☺ very nice people and very welcoming!
- Classroom management with Dean Archer was great insight and advice. Rotational workshop was fun. Earth Science was great. Bio was a little drawn out but still good information
- Interviewing with Mr. Beard and Mr. Peterson. Ms. Knapp's presentation
- Workshops! Love the involvement, Ag Bio, and Ag Earth workshops. Dean Archer was amazing. Food and accommodations were wonderful! Loved the Q&A panels!
- The rounds (question & answer time) with new teachers. This eased a lot of concerns we had.
- The interviews!! ☺
- I really enjoyed Mr. Archer
- My interviewing for the Ag Teaching Job with Richard Schmidig and Greg Beard. I also enjoyed Joey Silva and Earth Science
- The session on "Here is what I would do for student teaching" and the interview panels for the most part.
- The practice interviews
- Joey Silva, Cheryl and Dane. The one on one with the interview panels were great help.
- The job interview workshops were extremely helpful. The presenters really gave valuable advice and showed the skills I need to develop.
- The seminars including instructional material and the job interview portion. The peer and professional support and advice.
- The workshop by Atwater – loved all of the great ideas! ☺ Loved the interview day! Was so helpful
- The interviewing tips and other information
- The workshops on Thursday that helped give ideas for curriculum
- I valued Ms. Knapp's presentation on how to organize curriculum. Mr. Archer was extremely good at showing classroom management. I learned the most from Mr. Schmidig, Ms. Polland, Mr. Beard, and Mr. Peterson.
- The information and curriculum given to me.
- The honest questions and feedback from the interview presenters
- This is difficult but as of 8:00AM Friday, I enjoyed and valued the classroom management piece the most. It should be mandatory before student teaching. Classroom management 1st, Interviewing 2nd, Joey Silva Ag Earth 3rd
- Classroom management skills
- Dean Archer's presentation. Wonderful good and accommodations
- Ideas shared from other teachers

I was looking forward to but didn't get enough of:

- More one on one interview time. More inspirational speakers. More interactive seminars (learn by doing).
- Less on ideas
- How to organize curriculum, FFA and SAEs. I would have liked to have learned more other topics besides Ag Biology
- What is and how to do BTSA

- Classroom management problems. Best way/ideal situation to work with misbehaving students and what if you do not have a strong administration
- Handouts of interview questions
- Time to mix with new or other people. Teaching Ag. Mechanics/Floral
- Better directions please
- One on one interview time
- I would have loved more subject matter workshops and perhaps only 3 rounds of interviewing
- I would have enjoyed more subject matter workshops and maybe only 3 or 4 interview workshops
- Other than interview; resume, cover letter, portfolio
- Getting to know everybody
- Interviews. These were great and nerve-wracking but wished I could have gotten more chances to answer questions to get more practice
- Teaching specific subject such as Earth Science. It was fun and exciting and seeing more of that would have been nice.
- I would have loved to have been able to go to both “If I knew then, what I know now” workshops. I think information from colleagues who just went through the process is invaluable and I wish I could have heard from more.
- Specific classroom instruction help/tips/guides. I enjoyed both the Ag Earth and Bio help, but with the school I am at this year, neither of the guides are helpful for student teaching. But still will be beneficial for the future.
- Don’t put the university we are from on the name tags
Encourage everyone to be friendly! (students that is)
- I think the day one workshops could have been longer. I really liked those
- Meeting other Ag student teachers from other schools. Mixers are great but not enough time to mingle
- It was great.
- Maybe a little longer on the workshops on how to teach biology and earth science
- Resume help
- “The See, Hear, and Do Approach to Teaching Earth Science” The only reason I felt this way was because of the issues they had with the project at the start. So this shortened presentation and we did not get to do a few activities.
- Dean Archer! I would have loved to see him in the morning when I was feeling more fresh and “absorbant” 😊
- Some sort of social activity to get to know people from other schools better
Maybe have warm-up activities in between workshops so we aren’t sitting so much
More interactive workshops (maybe one on interest approaches – all sorts, not just fireworks!)
- Workshop experience
- More time with Beth Knapp and how she goes through stuff

What should be offered at the New Professionals Institute (1st – 3rd year teachers are invited)?

- Ag Earth Science workshop
- “Getting Your Students Involved”
- Ag Bio workshop with microscopes

- Interest approaches, ideas for non-powerpoint lessons, incorporating blooms into lesson planning, finding nontraditional SAEs for your students
- How to incorporate technology in a school that is not very technology advanced
- Ag Chemistry
- Classroom management
- I really liked how everything was set up for this and hope there are panels for asking questions and more how to teach things
- First and second year teachers idea
- Actual teaching strategies demonstrated as used in the classroom
- Basically what was here
- More Ag specific classroom instruction guides/helpers
- Aligning standards strategies
- Teaching more Ag specific classes and methods for classroom instruction. Floraculture would be extremely helpful for those whose student teaching school doesn't have the class.
One another note, the lack of professionalism on part of some of the attendees was very disappointing. For instance, the student teachers got drunk Thursday night and were acting very inappropriately and made it difficult for those trying to be responsible to sleep and enjoy the free time.
- Workshops on strategies for classroom management, ideas for subject areas like Ag Biology, Earth Science
- More communications and networking and mingling time
- Workshops on program development (Ag incentive grant, student data sheets, etc)
- Share activity so new teachers can compare experiences (what works, what doesn't work)
- More curriculum and lesson ideas. More Q&A panels from teachers a few years ahead of us.
- More curriculum ideas. More panel help and more ideas for FFA events to re-motivate us.
- Curriculum that schools have developed that work and they're willing to share
- Tech integration
- We should do interview with resume and cover letter
- Ideas on classroom management and science classes
- Classroom management
- Idea share – ways to get help from other teachers (i.e. getting lessons, projects)
- Opportunity for teachers to download/share each other's information
- More interview practice, more classroom management
- Time organization, curriculum organization/planning
- Teaching and classroom management techniques
- Supportive information. Q&A portion to talk about issues and problems. Professional development
